

General

How can I calculate my expected staking rewards?

You can use the COLX Staking calculator here:

<https://calculator.colossusxt.io/staking>

The formula:

T = the Total number of COLX currently staked. Current number is 2.24 billion (June 26th 2018)

P = your Personal number of COLX staked.

1440 = The number of blocks in a day

$T / (P * 1440)$ = your average number of days per reward

Unique solution ID: #1001
