

# General

## How can I calculate my expected Stakinglabs daily shared masternode reward?

Your shared masternode rewards will be equal to your share of a daily masternode reward, proportional to your percent stake in the masternode, minus StakingLabs' 5% fee.

Stakinglabs Shared Masternode Rewards Calculator:

<https://colx.ciwox.com/calculator-shared-mn>

It can be calculated as follows:

$(B / N) * R * (P / M) * (1 - F) = A$  B = blocks per day (1440)

N = current number of masternodes (currently 216)

R = current masternode block reward (570)

M = number of coins required for MN (10,000,000)

P = personal coins in shared masternode

F = Stakinglabs fee (5% or .05)

A = average masternode rewards earned per day

Example: If I have 750,000 coins on Stakinglabs, I will earn 270.5 COLX per day on average:  $(1440 / 216) * 570 * (750,000 / 10,000,000) * (1 - .05) = 270.5$
