

General

I'm getting below error / runaway exception while starting my wallet, what should I do?

**EXCEPTION: N5boost16exception_detail10clone_i
mplINS0_19error_info_injectorINS_16bad_lexical_c
astEEEE**

**bad lexical cast: source type value could not be
interpreted as target
colx in Applnit()**

Go to your data folder and start editing your masternode.conf

Remove all extra space characters in the end of the lines and between your texts.

Restart the wallet.

If you continue receiving the same error, you are probably missing to remove an extra space on your masternode.conf so please check details again to make sure.
